Ideation Phase
Brainstorm & Idea Prioritization Template

Date	09 March 2026
Team ID	
Project Name	Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau
Maximum Marks	4 Marks

Step-1: Team Gathering, Collaboration and Select the Problem Statement

During the ideation phase, the project team conducted discussions to identify key challenges in the real estate industry related to housing data analysis.

Real estate companies collect large volumes of property data such as:

- House prices
- House age
- Number of bedrooms and bathrooms
- Renovation status
- Basement area

However, analyzing this raw data using traditional methods is difficult. Stakeholders such as analysts and executives require an interactive system to visualize housing market trends and property characteristics.

Selected Problem Statement

Real estate organizations face difficulties in analyzing large housing datasets and identifying trends that influence house prices. Therefore, there is a need for a system that can analyze housing data and present meaningful insights through interactive visualizations and dashboards.

Step-2: Brainstorm, Idea Listing and Grouping

During brainstorming sessions, several ideas were proposed to solve the problem.

Ideas Generated

1. Create interactive dashboards to analyze housing price trends.
2. Use histograms to visualize housing price distribution.
3. Use pie charts to represent renovation status of houses.
4. Use bar charts to compare house features such as bedrooms and bathrooms.
5. Use scatter plots to analyze relationships between house size and price.

6. Build an interactive visualization system using Tableau.
7. Integrate dashboards with a web application for accessibility.
8. Use filters to allow users to explore housing data dynamically.

Idea Grouping

The generated ideas were grouped into the following categories:

Data Analysis

- Identify key housing market trends
- Analyze renovation impact on prices

Data Visualization

- Histograms
- Pie charts
- Bar charts
- Scatter plots

Dashboard Development

- Interactive dashboards
- Storyboards for insights

Web Integration

- Integrate Tableau dashboards with Flask web application

Step-3: Idea Prioritization

After evaluating the generated ideas, the team prioritized the best solution based on feasibility, usefulness, and innovation.

Selected Idea

Develop a Housing Market Analysis Dashboard using Tableau that visualizes housing price trends and property features. The dashboard will include multiple visualizations such as bar charts, histograms, pie charts, and scatter plots to analyze housing data.

The dashboard will be published on Tableau Public and integrated with a Flask web application to provide an interactive web interface.

Reasons for Selecting the Idea

- Provides clear visualization of housing market trends
- Helps stakeholders make better decisions
- Interactive dashboards improve data understanding

- Easy web access through Flask integration
- Scalable for future real estate analytics applications
