Project Name	Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is used to understand the needs, behaviours, and challenges of users interacting with a system. In this project, the empathy map focuses on stakeholders such as real estate analysts, property managers, and company executives who need insights into housing market trends.

By analysing the user's perspective, the system can be designed to provide meaningful visualizations and insights that help users make better decisions related to housing prices and property investments.

USER (Target User)

Real Estate Analysts, Property Managers, and Company Executives who analyse housing market data to understand property price trends and housing characteristics.

THINKS

Users often think about:

- What factors influence house prices the most?
- Are renovated houses more expensive than non-renovated houses?
- How does house age affect property value?
- What housing features attract buyers the most?
- How can we analyse housing data efficiently?

Users want a system that simplifies complex housing data and presents insights in a clear and visual format.

FEELS

Users may feel:

- Overwhelmed by large datasets containing housing information.
- Frustrated when trying to identify patterns manually in spreadsheets.
- Curious about housing market trends and price changes.

- Confident when data is presented through interactive dashboards.

The system should therefore provide a simple and user-friendly dashboard that allows easy exploration of housing insights.

SEES

Users typically see:

- Housing sales reports
- Real estate market statistics
- Property listings and housing data
- Large datasets containing multiple property attributes

However, these sources may not always present insights clearly. The dashboard helps transform raw data into meaningful visual information.

SPEAKS

Users often say:

- “We need better insights into housing market trends.”
- “Understanding renovation impact will help improve pricing strategies.”
- “Analysing housing features will help identify buyer preferences.”
- “A visual dashboard would make data analysis easier.”

DOES

Users usually:

- Analyse housing datasets
- Study market reports
- Compare housing features and prices
- Make decisions related to property investments and pricing strategies

With the help of the Tableau dashboard, users can perform these tasks more efficiently.

PAIN POINTS

Users experience several challenges such as:

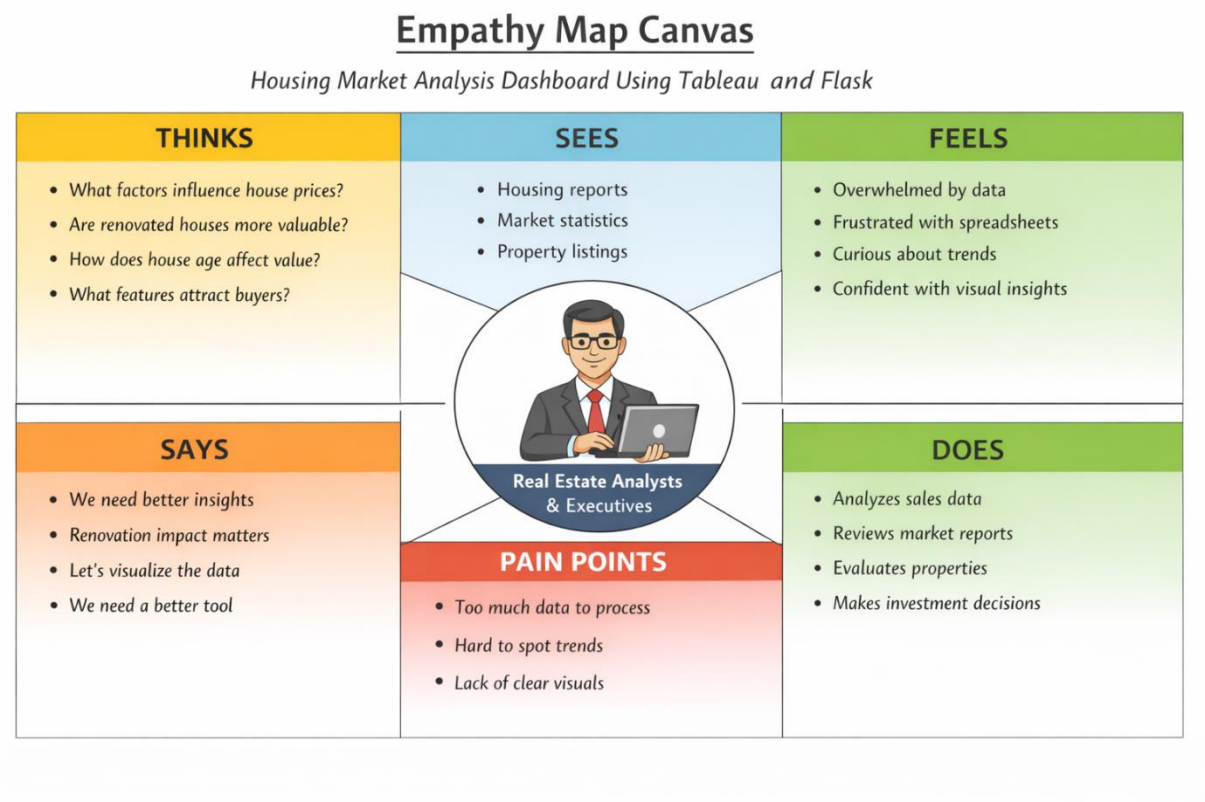
- Difficulty analysing large volumes of housing data

- Limited ability to identify trends using traditional spreadsheets
- Lack of clear visual representation of housing market insights

---

GAINS

The proposed system provides several benefits:

- Interactive visualizations of housing market trends
- Easy understanding of renovation impact on house prices
- Quick analysis of housing features such as bedrooms, bathrooms, and floors
- Web-based dashboard access through Flask integration


.
