Project Design Phase-I
Proposed Solution Template

Date	8 March 2026
Team ID	PNT2022TMIDxxxxxx
Project Name	Project - Visualizing Housing Market Trends: An Analysis of Sale Prices and Features using Tableau
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Real estate companies often struggle to understand the factors that influence housing prices and sales trends. Without proper analysis, it becomes difficult to identify patterns related to house age, renovations, number of bedrooms, bathrooms, and floors. This lack of insight makes it challenging for businesses to make informed decisions about pricing strategies, marketing approaches, and property investment
2.	Idea / Solution description	The proposed solution is to develop a **data visualization system using Tableau** that analyses housing market data and presents insights through interactive dashboards. The system will process housing data and visualize key metrics such as total sales by renovation years, house age distribution, and the relationship between house features and pricing. These dashboards will help stakeholders easily interpret complex data and identify meaningful trends in the housing market.
3.	Novelty / Uniqueness	he uniqueness of this project lies in the use of **interactive Tableau dashboards to analyse housing market data visually**. Instead of relying on traditional data analysis methods, this project transforms raw housing data into easy-to-understand visual insights. The dashboards allow users to explore trends dynamically, making the analysis more intuitive and efficient for decision-making.
4.	Social Impact / Customer Satisfaction	This solution helps real estate companies better understand housing market trends and customer preferences. By identifying factors that influence house prices and property demand, businesses can provide better services

		to customers and offer fair pricing. Additionally, buyers and investors benefit from improved market transparency and informed decision-making.
5.	Business Model (Revenue Model)	The system can be used by real estate companies, property investors, and housing analysts to analyse market data and improve decision-making. Businesses can generate revenue by offering **data-driven consulting services, market analysis reports, and subscription-based dashboard access** to real estate agencies and investors.
6.	Scalability of the Solution	The solution can be scaled by integrating larger housing datasets, real-time market data, and additional analytics features. Future improvements may include predictive analysis using machine learning, cloud-based dashboards, and integration with real estate platforms to provide automated insights for businesses worldwide.
